## **Blue Eddy Ornamental Onion**

***Allium senescens 'Blue Eddy'***

Plant Height: 6 inches

Flower Height: 12 inches

Spread: 12 inches

Sunlight:  

Hardiness Zone: 3

Other Names: Flowering Onion, Spiral Onion

### **Description:**

This interesting variety forms a very compact clump of strongly swirling, blue-green foliage, resembling eddies of water; pink-purple flower clusters in summer atop leafless stems in summer are spectacular when massed

### **Ornamental Features**

Blue Eddy Ornamental Onion has masses of beautiful balls of lilac purple flowers with pink overtones at the ends of the stems from late summer to early fall, which are most effective when planted in groupings. Its twisted grassy leaves remain bluish-green in color throughout the season.

### **Landscape Attributes**

Blue Eddy Ornamental Onion is an open herbaceous perennial with an upright spreading habit of growth. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Blue Eddy Ornamental Onion is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use

### **Planting & Growing**

Blue Eddy Ornamental Onion will grow to be only 6 inches tall at maturity extending to 12 inches tall with the flowers, with a spread of 12 inches. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen! As this plant tends to go dormant in summer, it is best interplanted with late-season bloomers to hide the dying foliage.

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by multiplication of the underground bulbs; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
