**Amate Schefflera**

Schefflera actinophylla 'Amate'

Height: 10 feet

Spread: 5 feet

Sunlight: ● ●

Hardiness Zone: 9

Other Names: Umbrella Plant

Description:

A popular variety, with a dwarf growth habit that is better suited for indoor applications; stunning foliage will brighten any room with its dark green, glossy appearance

Features & Attributes

Amate Schefflera's attractive large glossy oval compound leaves remain dark green in color throughout the year on a plant with a round habit of growth. The burgundy stems can be quite attractive and add to the plant's interest.

This is a multi-stemmed evergreen houseplant with a more or less rounded form. This plant can be pruned at any time to keep it looking its best.

Planting & Growing

When grown indoors, Amate Schefflera can be expected to grow to be about 10 feet tall at maturity, with a spread of 5 feet. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. This houseplant performs well in both bright or indirect sunlight and strong artificial light, and can therefore be situated in almost any well-lit room or location. It does best in average to evenly moist soil, but will not tolerate standing water. The surface of the soil shouldn't be allowed to dry out completely, and so you should expect to water this plant once and possibly even twice each week. Be aware that your particular watering schedule may vary depending on its location in the room, the pot size, plant size and other conditions; if in doubt, ask one of our experts in the store for advice. It is not particular as to soil type or pH; an average potting soil should work just fine. Be warned that parts of this plant are known to be toxic to humans and animals, so special care should be exercised if growing it around children and pets.
