Sugary Tomato

Solanum lycopersicum 'Sugary'

Height: 4 feet

Spread: 24 inches Spacing: 24 inches

Sunlight: 0

Hardiness Zone: (annual)

Group/Class: Cherry/Grape-Determinate

Sugary Tomato fruit Photo courtesy of NetPS Plant Finder

Description:

A lovely, high yielding and vigorous selection, producing grape like clusters of dark pink-red colored tomatoes; small oval fruit with tapered ends with a perfectly sweet flavor grow from a semi trailing variety; great for snacking and salads

Edible Qualities

Sugary Tomato is an annual vegetable plant that is typically grown for its edible qualities, although it does have ornamental merits as well. It produces small clusters of red oval tomatoes (which are technically 'berries') which are usually ready for picking from early summer to early fall. This is a determinate variety, which means it bears a full crop all at once. The tomatoes have a sweet taste.

The tomatoes are most often used in the following ways:

- Fresh Eating
- Eating When Cooked/Prepared
- Cooking
- Pickling
- Canning

Planting & Growing

10850 N Port Washington 601 Wildwood Road

Sugary Tomato will grow to be about 4 feet tall at maturity, with a spread of 24 inches. When planted in rows, individual plants should be spaced approximately 24 inches apart. Because of its vigorous growth habit, it may require staking or supplemental support. This fast-growing vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant can be integrated into a landscape or flower garden by creative gardeners, but is usually grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.

Sugary Tomato is a good choice for the vegetable garden, but it is also well-suited for use in outdoor containers and hanging baskets. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
