Corsican Stonecrop

Sedum dasyphyllum 'var. major'

Plant Height: 3 inches Flower Height: 4 inches

Spread: 12 inches Spacing: 10 inches

Sunlight: O D Hardiness Zone: 4

Other Names: Major Stonecrop

Description:

A low carpeting variety with white flowers held atop rounded foliage that is blue-green; a drought-tolerant plant useful for hot sunny sites; a great choice for containers, edging and rock gardens

Ornamental Features

Corsican Stonecrop is covered in stunning clusters of white star-shaped flowers at the ends of the stems in early summer. The flowers are excellent for cutting. Its attractive succulent round leaves remain bluish-green in color throughout the year.

Landscape Attributes

Corsican Stonecrop is a dense herbaceous evergreen perennial with a ground-hugging habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Corsican Stonecrop is recommended for the following landscape applications;

Planting & Growing

Corsican Stonecrop will grow to be only 3 inches tall at maturity extending to 4 inches tall with the flowers, with a spread of 12 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 10 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 15 years. As an evegreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil pH, but grows best in poor soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Corsican Stonecrop is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
