**Snowflake Phlox**

*Phlox subulata 'Snowflake'*

Plant Height: 4 inches

Flower Height: 6 inches

Spread: 18 inches

Spacing: 15 inches

Sunlight:

Hardiness Zone: 2

Other Names: Creeping Phlox

**Description:**

This variety produces a showy carpet of bright white flowers shining in the spring sun; prune lightly after flowering to encourage a dense growth habit; wonderful for rock gardens, edging, or in mixed containers

**Ornamental Features**

Snowflake Phlox is smothered in stunning white star-shaped flowers with buttery yellow eyes at the ends of the stems in late spring. Its tiny needle-like leaves remain forest green in color throughout the year.

**Landscape Attributes**

Snowflake Phlox is a dense herbaceous evergreen perennial with a ground-hugging habit of growth. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This plant will require occasional maintenance and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading

Snowflake Phlox is recommended for the following landscape applications;

***We are so proud of the nursery stock that we have carefully selected for superior quality and performance, WE GUARANTEE ALL TREES, SHRUBS, EVERGREENS FOR 2 YEARS, AND ROSES FOR 1 YEAR!***

**Planting & Growing**

Snowflake Phlox will grow to be only 4 inches tall at maturity extending to 6 inches tall with the flowers, with a spread of 18 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 15 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type, but has a definite preference for alkaline soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider covering it with a thick layer of mulch in winter to protect it in exposed locations or colder microclimates. This is a selection of a native North American species. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
