Leonard Messel Magnolia

Magnolia x loebneri 'Leonard Messel'

Height: 20 feet

Spread: 15 feet

Sunlight:

Hardiness Zone: 4

Description:

A popular hybrid magnolia, known for its early spring bloom in froths of large, extremely fragrant white flowers tinged in pink and picturesque habit of growth; flowers from a young age, excellent size for use as a feature in the home landscape

Ornamental Features

Leonard Messel Magnolia is smothered in stunning fragrant fuchsia star-shaped flowers with shell pink overtones, yellow eyes and pink centers at the ends of the branches in mid spring before the leaves. It has dark green foliage throughout the season. The pointy leaves do not develop any appreciable fall color. The fruits are showy pink pods displayed from early to mid fall.

Landscape Attributes

Leonard Messel Magnolia is a deciduous tree with a distinctive and refined pyramidal form. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance tree, and should only be pruned after flowering to avoid removing any of the current season's flowers. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Leonard Messel Magnolia is recommended for the following landscape applications;

Planting & Growing

Leonard Messel Magnolia will grow to be about 20 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 80 years or more.

This tree does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is not particular as to soil type, but has a definite preference for acidic soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.

We are so proud of the nursery stock that we have carefully selected for superior quality and performance, WE GUARANTEE ALL TREES, SHRUBS, EVERGREENS & VINES FOR 2 YEARS; ROSES FOR 1 YEAR!
