Pepperoncini

Capsicum annuum 'Pepperoncini'

Height: 24 inches

Spread: 18 inches

Spacing: 22 inches

Sunlight: O

Hardiness Zone: (annual)

Other Names: Tuscan Pepper

#### **Description:**

A high yielding variety producing thin walled, mild to medium hot peppers; great for containers and gardens; peppers emerge light green-yellow and matures to red; they are commonly picked at the green stage; perfect pickling variety

#### **Edible Qualities**

Pepperoncini is an annual vegetable plant that is typically grown for its edible qualities, although it does have ornamental merits as well. It produces light green peppers (which are technically 'berries') with yellow overtones which can be harvested at any point. The fruit will often fade to red over time. The peppers have a spicy taste and a crisp texture.

The peppers are most often used in the following ways:

- Fresh Eating
- Eating When Cooked/Prepared
- Cooking
- Pickling
- Sauces

#### **Planting & Growing**

Pepperoncini will grow to be about 24 inches tall at maturity, with a spread of 18 inches. When planted in rows, individual plants should be spaced approximately 22 inches apart. This vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant can be integrated into a landscape or flower garden by creative gardeners, but is usually grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America, and it is considered by many to be an heirloom variety. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Pepperoncini is a good choice for the vegetable garden, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
