Early Summer Pepper

Capsicum annuum 'Early Summer'

Height: 28 inches Spread: 18 inches Spacing: 20 inches

Sunlight: 0

Hardiness Zone: (annual) Group/Class: Sweet Bell

Early Summer Pepper fruit Photo courtesy of NetPS Plant Finder

Description:

Bright yellow, blocky bell peppers grow all season long on strong upright plants; perfect for large patio containers and gardens; sweet and delicious flavor with thick walls, great for grilling, roasting, stuffing and salads; excellent disease resistance

Edible Qualities

Early Summer Pepper is an annual vegetable plant that is commonly grown for its edible qualities, although it does have ornamental merits as well. It produces large dark green peppers (which are technically 'berries') with yellow flesh which are usually ready for picking from mid summer to early fall. The fruit will often fade to yellow over time. The peppers have a sweet taste and a crisp texture.

The peppers are most often used in the following ways:

- Fresh Eating
- Eating When Cooked/Prepared
- Cooking
- Baking
- Freezing

Planting & Growing

Early Summer Pepper will grow to be about 28 inches tall at maturity, with a spread of 18 inches. When planted in rows, individual plants should be spaced approximately 20 inches apart. This vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant can be integrated into a landscape or flower garden by creative gardeners, but is usually grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This is a selected variety of a species not originally from North America.

Early Summer Pepper is a good choice for the vegetable garden, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
