Sunlight: ●

Hardiness Zone: 10

Other Names: Big Leaf Orchid

Group/Class: Moth Orchid

**Description:**

A family of floriferous orchid hybrids that produce multiple, short spikes of blooms in a variety of colors; an excellent focal plant for containers or hanging baskets

**Features & Attributes**

Hybrid Moth Orchid features showy spikes of buttery yellow orchid-like flowers with orange centers at the ends of the stems in early spring. Its oval leaves remain dark green in color throughout the year.

This is an open herbaceous evergreen houseplant with tall flower stalks held atop a low mound of foliage. Its relatively fine texture sets it apart from other indoor plants with less refined foliage. This plant should not require much pruning, except when necessary to keep it looking its best.

**Planting & Growing**

When grown indoors, Hybrid Moth Orchid can be expected to grow to be only 6 inches tall at maturity extending to 12 inches tall with the flowers, with a spread of 6 inches. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 10 years. This houseplant should only be grown away from direct sunlight or in a room with strong artificial light. It does best in average to evenly moist soil, but will not tolerate standing water. The surface of the soil shouldn't be allowed to dry out completely, and so you should expect to water this plant once and possibly even twice each week. Be aware that your particular watering schedule may vary depending on its location in the room, the pot size, plant size and other conditions; if in doubt, ask one of our experts in the store for advice. It is not particular as to soil type or pH; an average potting soil should work just fine.
