CranRazz Butterfly Bush Buddleia davidii 'CranRazz'

Height: 6 feet Spread: 5 feet Sunlight: 0

10850 N Port Washington 601 Wildwood Road

Hardiness Zone: 4

Other Names: Summer Lilac, Buddleia Boscranz

Description:

An amazing garden plant with large, cone shaped clusters of rich raspberry blooms from dark red buds; attracts butterflies; a beautiful color addition to the landscape that blooms all season long

Ornamental Features

CranRazz Butterfly Bush features showy panicles of fragrant fuchsia flowers with orange eyes and a white ring at the ends of the branches from late spring to early fall, which emerge from distinctive dark red flower buds. The flowers are excellent for cutting. It has grayish green deciduous foliage. The fuzzy narrow leaves do not develop any appreciable fall color.

Landscape Attributes

CranRazz Butterfly Bush is an open multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees, butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

CranRazz Butterfly Bush is recommended for the following landscape applications;

Planting & Growing

CranRazz Butterfly Bush will grow to be about 6 feet tall at maturity, with a spread of 5 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.

CranRazz Butterfly Bush makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
