Harlequin™ Magenta Beard Tongue ***Penstemon 'TNPENHM'***

Plant Height: 16 inches

Flower Height: 22 inches

Spread: 16 inches

Spacing: 12 inches

Sunlight: ☉ ●

Hardiness Zone: 5

Other Names: Beardtongue

Group/Class: Harlequin Series

Description:

A vigorous, disease resistant plant with a compact, bushy habit; produces a profusion of magenta-red blooms with striped white throats; an excellent complement to other perennials; great for border fronts, along walkways, or in containers

Ornamental Features

Harlequin Magenta Beard Tongue has masses of beautiful spikes of hot pink tubular flowers with red overtones, white throats and dark red stripes rising above the foliage from early to late summer, which are most effective when planted in groupings. The flowers are excellent for cutting. Its narrow leaves remain green in color throughout the season.

Landscape Attributes

Harlequin Magenta Beard Tongue is an herbaceous perennial with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies and hummingbirds to your yard. It has no significant negative characteristics.

Harlequin Magenta Beard Tongue is recommended for the following landscape applications;

Planting & Growing

Harlequin Magenta Beard Tongue will grow to be about 16 inches tall at maturity extending to 22 inches tall with the flowers, with a spread of 16 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Harlequin Magenta Beard Tongue is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
