**Honey 'n Pearl Sweet Corn**

Zea mays 'Honey 'n Pearl'

Height: 6 feet

Spread: 30 inches

Spacing: 15 inches

Sunlight: ☉

Hardiness Zone: (annual)

Group/Class: Supersweet

Description:

A wonderful early maturing and high yielding variety that is ready right in time for sunny summer BBQs; produces 9" long ears of corn with tightly packed and juicy yellow and white kernels; sweet and tender, perfect for eating fresh, grilled and freezing

Edible Qualities

Honey 'n Pearl Sweet Corn is an annual vegetable plant that is commonly grown for its edible qualities, although it does have ornamental merits as well. It produces small cobs of yellow long kernels with white variegation which are typically harvested when mature. The kernels have an exceptionally sweet taste and a juicy texture.

The kernels are most often used in the following ways:

- Cooking
- Baking
- Preserves
- Canning
- Freezing

Planting & Growing

Honey 'n Pearl Sweet Corn will grow to be about 6 feet tall at maturity, with a spread of 30 inches. When planted in rows, individual plants should be spaced approximately 15 inches apart. This fast-growing vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop. This is a self-pollinating variety, so it doesn't require a second plant nearby to set fruit.

This plant can be integrated into a landscape or flower garden by creative gardeners, but is usually grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selection of a native North American species.
