**Little Rocket Rayflower**

Ligularia 'Little Rocket'

Plant Height: 24 inches

Flower Height: 4 feet

Spread: 30 inches

Sunlight: ● ●

Hardiness Zone: 3

Description:

This dwarf cultivar of The Rocket is an excellent choice where space is a concern; long spikes of bright yellow flowers rise above dark green foliage that is coarse in texture; likes partial shade in afternoon; great for waterside applications

Ornamental Features

Little Rocket Rayflower features bold spikes of yellow flowers rising above the foliage from mid to late summer. Its large serrated heart-shaped leaves remain dark green in color throughout the season. The deep purple stems are very colorful and add to the overall interest of the plant.

Landscape Attributes

Little Rocket Rayflower is an herbaceous perennial with a rigidly upright and towering form. Its wonderfully bold, coarse texture can be very effective in a balanced garden composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Little Rocket Rayflower is recommended for the following landscape applications;

Planting & Growing

Little Rocket Rayflower will grow to be about 24 inches tall at maturity extending to 4 feet tall with the flowers, with a spread of 30 inches. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 20 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It prefers to grow in moist to wet soil, and will even tolerate some standing water. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
