**Woodland Stonecrop**

*Sedum ternatum*

Plant Height: 8 inches

Flower Height: 12 inches

Spread: 15 inches

Spacing: 12 inches

Sunlight: ● ●

Hardiness Zone: 3

Other Names: Wild Stonecrop

**Description:**

This mat forming native sedum is unlike most of its cousins in that it prefers partially shaded conditions and moist soil; starry white blooms are revealed throughout spring; evergreen leaves are shiny and succulent, creating a lush woodland groundcover

**Ornamental Features**

Woodland Stonecrop's succulent round leaves emerge light green in spring, turning green in color the rest of the year on a plant with an upright spreading habit of growth.

**Landscape Attributes**

Woodland Stonecrop is a dense herbaceous evergreen perennial with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Woodland Stonecrop is recommended for the following landscape applications;

**Planting & Growing**

Woodland Stonecrop will grow to be about 8 inches tall at maturity extending to 12 inches tall with the flowers, with a spread of 15 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 15 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in partial shade to shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This species is native to parts of North America. It can be propagated by division.

Woodland Stonecrop is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing the canvas against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
