### Grandiflorus Cheddar Pinks Dianthus gratianopolitanus 'Grandiflorus'

Plant Height: 6 inches Flower Height: 10 inches

Spread: 15 inches Spacing: 12 inches

Sunlight: 0

Hardiness Zone: 3

Other Names: Clove Pinks

Grandiflorus Cheddar Pinks flowers Photo courtesy of NetPS Plant Finder

#### **Description:**

This stunning variety bursts into a mass of larger than usual hot pink blooms from late spring through the summer; quickly grows to form a dense weed stopping mound; regular dead heading extends blooming until fall

#### **Ornamental Features**

Grandiflorus Cheddar Pinks has masses of beautiful fragrant hot pink frilly flowers with a dark red ring at the ends of the stems from late spring to mid summer, which are most effective when planted in groupings. The flowers are excellent for cutting. Its attractive grassy leaves remain bluish-green in color throughout the year.

#### **Landscape Attributes**

Grandiflorus Cheddar Pinks is an herbaceous evergreen perennial with a mounded form. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This plant will require occasional maintenance and upkeep, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Grandiflorus Cheddar Pinks is recommended for the following landscape applications;

### **Planting & Growing**

Grandiflorus Cheddar Pinks will grow to be only 6 inches tall at maturity extending to 10 inches tall with the flowers, with a spread of 15 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 5 years. As an evegreen perennial, this plant will typically keep its form and foliage year-round.

This plant should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Grandiflorus Cheddar Pinks is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers and foliage against which the thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
